WORKOUT ASSISTANT... WITH A TWIST

What sets us apart is our focus on **anonymity and privacy**. Our app also leverages **generative Al to create customized workouts** for each user!

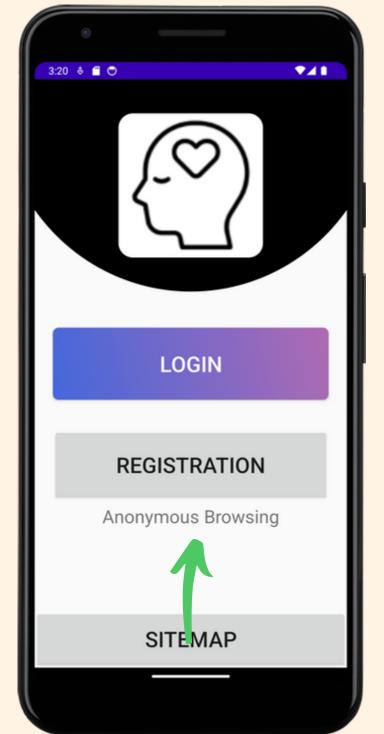

What is it?

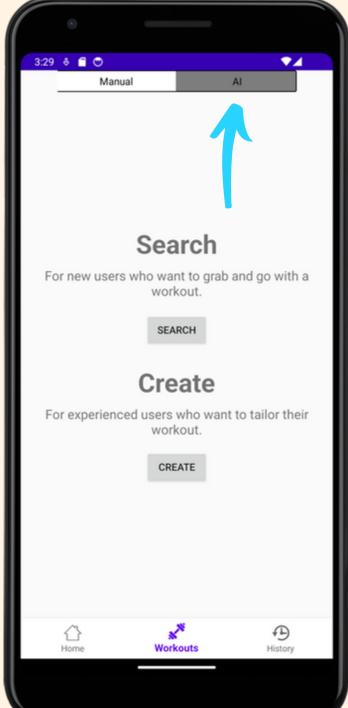

- It's a health application that allows users to select and **personalize workouts**
- Suitable for **any fitness level**
- Uses AI to facilitate users progress
- Helps users stay motivated on their fitness goals

Key Concepts

- Al integration for selecting functions
 - Customized workouts designed with ChatGPT
- Emphasis on Anonymity and Privacy
 - Anonymous mode available, enabling users to enjoy the app offline without logging in or transmitting data to us
 - While offline, AI is unavailable and nothing about the user is remembered.

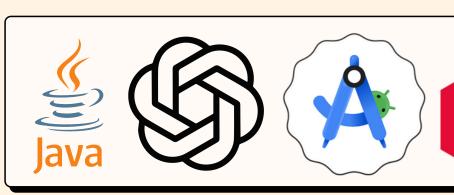

AI

Our app has a dedicated workouts page where users can select from a collection of pre-made workouts, or answer a few questions to allow the Al to create a personalized workout tailored to their goals. We've accomplished the latter by integrating ChatGPT's API, which is fed the answers to the questions.

Anonymity

In today's world, anonymity is a hotly debated topic. The constant collection, sale, and analysis of people's data has created unease. In response, we have developed an **anonymous mode** in our app. This feature provides users with **access to most of the functionality while remaining fully incognito**.
